

7,s With 4 Players

With 4 players, use one deck of cards (no jokers).

Deal out all cards. The player holding the 7 of spades starts by playing that card on the table. Each player is delt 13 cards. Deal is twice around table.

When playing with money, each player will ante 3 quarters. Player with low score after each deal wins one quarter. Player with total low score at end of game wins remaining 4 quarters.

Player to the left of played 7 of spades then plays either a 6 or 8 of spades or another 7 of any suit. Play up or down on any 7 to King high or Ace low. You can play a 7 any time but you cannot play higher or lower than the 7 pile prior to it on the table. If unable to play then the player to their left gives a card of their choice from their hand to that player.

Example - The 7 of spades has been played. The next player played the 6 of spades. The next player can play the 5 of spades, the 8 of spades or any other 7. If unable to play, the person to that players left will give a card of their choice from their hand. At no time can a card be played higher or lower than the 7 pile prior to it on the table.

The first person that gets rid of all their cards wins that hand. All other players add up the point total of the cards remaining in their hand. The point total of each hand is totaled together and lowest point total at end of game wins.

Card point count - 2 thru 7 = 5 points

8 thru K = 10 points

Ace = 20 points
